SURGEON'S STORY

Dr. Parinya is nationally and internationally recognized in plastic surgery societies. His professional background contributes significantly to his skills to tailor plastic and reconstructive surgeries for his patients. When talking with patients about the objectives they want to achieve with plastic surgery procedures, he always carefully evaluates the most suitable approaches that achieve the best possible results for them.

Dr. Parinya and his team care for each and every one of their patients. Both share a plain talk approach to educating the patients, helping make optimal decisions, and commit to delivering the most state-of-the-art cosmetic surgery with the most rapid and predictable recovery.

In aesthetic surgery, he is interested in Facial Surgery, Rhinoplasty and Body Contouring surgery. In addition to aesthetic treatments, he performs complex reconstructive procedures to restore a more natural appearance to the face and body and also to improve body function after a traumatic injury or illness. This ranges from breast reconstruction for cancer patients to nasal surgery to correct breathing problems.
